

Your body is made up of trillions of cells, too small

to see, even with a microscope!

Inside these tiny cells are

23 pairs of chromosomes,

that make you the person you are. The information in your chromosomes

determines your hair  color,

your eye  color, how you **grow**,

and all of the other things that you can do.

People with

CRI DU CHAT SYNDROME

are missing a small part of

Chromosome 5.

It sometimes makes it tricky for them to do things, and it might take a little longer for them to learn to walk and talk.

☺ Sometimes, they might need your help. ☺
